Nepali ● ● ● ● ●

Sundar Gautam

Experienced Software developer having expertise in full-stack software development. Since the beginning, I held a strong passion for overall software development and tech. I often use my leisure time to explore new techs. Besides that, I am a passionate teacher/mentor, who loves random things and prioritizes life experience over anything. My description would be incomplete without mentioning my passion for writing,reading, creation, and formulating something awesome. I am sure you will love having a talk with me with coffee in hand.

EXPERIENCE

React Tutor

Coursly Nepal / Kathmandu / December, 2021 - March, 2022

I got a chance to share my knowledge about ReactJS to more than 10 students through Coursly Nepal. Here, I not only learned to tutor/guide students but also got a chance to improve my communication and interaction skills.

Junior MERN Stack Developer

Swivt Technologies / Lalitpur / January, 2021 - Present

I got a chance to work on multiple projects ranging from e-commerce to auction systems. I have mostly worked on designing fully scalable boilerplates for MERN stack projects, worked on real-time bidding systems (HongKong Based Auction System), actively engaged to fix bugs/issues and embedded a lot of changeable features/requirements in multiple projects of the company. I do have good experience of communicating with international clients for gathering requirements, reporting progress and completing the project on the deadline.

PROJECTS

Auction BlueSky

It is a Hongkong based auction system for electronic devices.I have worked on complete system flow ranging from scalable schema designing, workflow and has worked on real-time bidding functionality working with the socket.

Papabo

Hongkong based Repair and maintenance website
